

Additional mRNA COVID-19 Vaccines for Moderately to Severely Immunocompromised People

Clinician Outreach and Communication Activity (COCA) Webinar

Tuesday, August 17, 2021

Continuing Education

- Continuing education is not offered for this webinar.

To Ask a Question

- Using the Zoom Webinar System
 - Click on the “Q&A” button
 - Type your question in the “Q&A” box
 - Submit your question
- If you are a patient, please refer your question to your healthcare provider.
- If you are a member of the media, please direct your questions to CDC Media Relations at 404-639-3286 or email media@cdc.gov.

Today's Presenters

- **Kathleen Dooling, MD, MPH**
ACIP Workgroup Team Lead
Vaccine Task Force
COVID-19 Response
Centers for Disease Control and Prevention
- **Tom Shimabukuro, MD, MPH, MBA**
CAPT, U.S. Public Health Service
Vaccine Safety Team Lead
Vaccine Task Force
COVID-19 Response
Centers for Disease Control and Prevention
- **Neela Goswami, MD, MPH**
Clinical Guidelines Team Lead
Vaccine Task Force
COVID-19 Response
Centers for Disease Control and Prevention
- **Katherine Shealy, MPH, IBCLC**
Vaccine Clinical Inquiry Management Team Lead
Vaccine Task Force
COVID-19 Response
Centers for Disease Control and Prevention

Evidence to Recommendation Framework:

An Additional Dose of mRNA COVID-19 Vaccine
Following a Primary Series in
Immunocompromised People

Dr. Kathleen Dooling, MD, MPH
COCA Call
August 17, 2021

cdc.gov/coronavirus

FDA: Emergency Use Authorization (EUA) Amendment

- **August 12, 2021:** FDA Authorizes Additional Vaccine Dose for Certain Immunocompromised Individuals*
 - Other fully vaccinated individuals do not need an additional dose right now
 - Amendment applies to:
 - **Pfizer-BioNTech** COVID-19 vaccine (BNT162b2) (≥12 years old)
 - **Moderna** COVID-19 vaccine (mRNA-1273) (≥18 years old)
- Due to insufficient data, the EUA amendment for an additional dose does not apply to Janssen COVID-19 vaccine or to individuals who received Janssen COVID-19 as a primary series. CDC and FDA are actively engaged to ensure that immunocompromised recipients of Janssen COVID-19 vaccine have optimal vaccine protection

*<https://www.fda.gov/news-events/press-announcements/coronavirus-covid-19-update-fda-authorizes-additional-vaccine-dose-certain-immunocompromised>

Evidence to Recommendations Framework

Population: Immunocompromised People

People with medical conditions or people receiving treatments that are associated with moderate to severe immune compromise.¹

- Active or recent treatment for solid tumor and hematologic malignancies
- Receipt of solid-organ or recent hematopoietic stem cell transplants
- Severe primary immunodeficiency
- Advanced or untreated HIV infection
- Active treatment with high-dose corticosteroids, alkylating agents, antimetabolites, tumor-necrosis (TNF) blockers, and other biologic agents that are immunosuppressive or immunomodulatory

1. Additional information about the level of immune suppression associated with a range of medical conditions and treatments can be found in [general best practices for vaccination of people with altered immunocompetence, the CDC Yellow Book, and the Infectious Diseases Society of America policy statement, 2013 IDSA Clinical Practice Guideline for Vaccination of the Immunocompromised Host](#)

Intervention: An Additional Dose of mRNA COVID-19 Vaccine

- An additional dose of
 - **Pfizer-BioNTech** COVID-19 vaccine (BNT162b2) (≥ 12 years old)
 - **Moderna** COVID-19 vaccine (mRNA-1273) (≥ 18 years old)after an initial 2-dose primary series of mRNA COVID-19 vaccine, in immunocompromised people
- Attempts should be made to match the additional dose type to the mRNA primary series, however if that is not feasible, a **heterologous additional dose is permitted**
- The additional dose of mRNA COVID-19 vaccine should be administered **at least 28 days** after completion of the primary mRNA COVID-19 vaccine series

EtR Domain: Public Health Problem

Daily Trends in Number of COVID-19 Cases in the US

January 22, 2020 – Aug 9, 2021

Cases Total

35,665,877

Immunocompromised People and SARS-CoV-2 Infection

- Immunocompromised people comprise ~2.7% of U.S. adults (~7 million adults)¹
- More likely to get severely ill from COVID-19^{1,2}
- Higher risk for:
 - Prolonged SARS-CoV-2 infection and shedding^{3-7, 14-16}
 - Viral evolution during infection and treatment (hospitalized patients)^{3,6,8-10,14,17}
- Lower antibody/neutralization titers to SARS-CoV-2 variants compared to non-immunocompromised people¹²
- More likely to transmit SARS-CoV-2 to household contacts¹¹

Immunocompromised People and Vaccine Breakthrough Infection

- More likely to have breakthrough infection
 - 40-44% of hospitalized breakthrough cases are immunocompromised people in US study¹⁻²
- Lower vaccine effectiveness
 - 59--72% VE among immunocompromised people vs. 90--94% among non-immunocompromised people after 2nd dose^{1, 3-5}

EtR Domain: Benefits and Harms

Benefits:

Randomized Trial of a 3rd Dose of Moderna Vaccine in Transplant Recipients (n=120)

RBD antibody (≥ 100 U/ml) 1
month post dose 3:

33 of 60 patients
(55%) vaccine group

vs.

10 of 57 patients
(18%) placebo group

Benefits:

Study	Patient Population	2 nd Dose			3 rd Dose Seronegative after 2 nd dose		
		Sample Size	Seronegative N (%)	Seropositive N (%)	Sample Size	Seronegative N (%)	Seropositive N (%)
Kamar et al.	Recipients of solid-organ transplant	99	59 (60)	40 (40)	59	33 (56)	26 (44)
Werbelt et al.	Recipients of solid-organ transplant	30	24 (80)	6 (20)	24	16 (67)	8 (33)
Longlune et al.	Patients on hemodialysis	82	13 (16)	69 (84)	12	7 (58)	5 (42)
Epsi et al.	Patients on hemodialysis	106	66 (62)	40 (38)	12	6 (50)	6 (50)
Ducloux et al.	Patients on hemodialysis	45	5 (11)	40 (89)	5	3 (60)	2 (40)

- Among those who had **no detectable antibody** response to an initial mRNA vaccine series, **33-50% developed an antibody response to an additional dose**

Benefits and Harms:

- The proportion of the group who are seropositive increase after each dose: **40%** post dose 2 and **68%** post dose 3
- Average antibody titers increased after each dose
- No serious adverse events were reported after administration of the 3rd dose, and no acute rejection episodes occurred (n=99 Solid Organ Transplant Patients)

Harms:

- No patients developed critical side effects which required hospitalization
- Symptoms reported were consistent with previous doses and the intensity of the symptoms was mostly mild or moderate

Benefits and Harms:

Summary of the Available Evidence

Benefits:

- Emerging experimental and observational data in adults suggest that an additional mRNA COVID-19 vaccine dose in immunocompromised people enhances antibody response and increases the proportion who respond to COVID-19 vaccine
- No efficacy or effectiveness studies of COVID-19 prevention following a 3rd dose

Harms:

- In small studies of an additional dose of mRNA vaccine
 - No serious adverse events were observed
 - Reactogenicity of the 3rd dose of mRNA vaccine was similar to prior doses
- mRNA COVID-19 vaccines are associated with rare but serious adverse events, including anaphylaxis as well as myocarditis and pericarditis in young adults. The impact of immunocompromising conditions on these rare events is unknown.
- There are no safety studies of an additional mRNA dose in immunocompromised adolescents

Summary

EtR Domain	Question	Work Group Judgments
Public Health Problem	Is COVID-19 disease among immunocompromised people of public health importance?	Yes
Benefits and Harms	How substantial are the desirable anticipated effects?	Large
	How substantial are the undesirable anticipated effects?	Minimal
	Do the desirable effects outweigh the undesirable effects?	Favors additional dose of mRNA vaccine in immunocompromised people
	What is the overall certainty of the evidence for the critical outcomes?	Not GRADED
Values	Does the target population feel the desirable effects are large relative to the undesirable effects?	Large
	Is there important variability in how patients value the outcomes?	Probably not important variability
Acceptability	Is an additional dose of mRNA COVID-19 vaccines acceptable to key stakeholders?	Yes
Feasibility	Is an additional dose of mRNA COVID-19 vaccine feasible to implement among immunocompromised people?	Yes
Resource Use	Is an additional dose of mRNA COVID-19 vaccine, given to immunocompromised people, a reasonable and efficient allocation of resources?	Yes
Equity	What would be the impact of an additional dose of mRNA COVID-19 vaccine, given to immunocompromised people, on health equity?	Probably no impact

Evidence to Recommendations Framework

Summary: Work Group Interpretations

Balance of consequences	Undesirable consequences <i>clearly outweigh</i> desirable consequences in most settings	Undesirable consequences <i>probably outweigh</i> desirable consequences in most settings	The balance between desirable and undesirable consequences is <i>closely balanced</i> or <i>uncertain</i>	Desirable consequences <i>probably outweigh</i> undesirable consequences in most settings	Desirable consequences <i>clearly outweigh</i> undesirable consequences in most settings	There is insufficient evidence to determine the balance of consequences
--------------------------------	--	---	---	---	--	---

Evidence to Recommendations Framework

Summary: Work Group Interpretations

Type of recommendation	We do not recommend the intervention	We recommend the intervention for individuals based on shared clinical decision-making	We recommend the intervention
-------------------------------	--------------------------------------	--	-------------------------------

ACIP Vote – Interim Recommendation

An additional dose of Pfizer-BioNTech COVID-19 vaccine (≥12 years) or Moderna COVID-19 vaccine (≥18 years) is recommended following a primary series in immunocompromised people*

*under the FDA's Emergency Use Authorization

Clinical Considerations for Use of an Additional mRNA COVID-19 Vaccine Dose Following a Primary mRNA COVID-19 Vaccine Series for Immunocompromised People

Neela D. Goswami, MD, MPH
CDC Clinician Outreach and Communication Activity
August 17, 2021

cdc.gov/coronavirus

Additional doses in immunocompromised people

Roles of an Additional Dose

There are two distinct potential uses for an additional vaccine dose:

- **Additional dose after an initial primary vaccine series**: administration of an additional vaccine dose associated with the primary vaccine series when the initial immune response to that primary vaccine series is likely to be **insufficient**.
- **Booster dose**: a dose of vaccine administered when the initial **sufficient** immune response to a primary vaccine series is likely to have waned over time. The need for and timing of a COVID-19 booster dose have not been established

Roles of an Additional Dose

There are two distinct potential uses for an additional vaccine dose:

- **Additional dose after an initial primary vaccine series**: administration of an additional vaccine dose associated with the primary vaccine series when the initial immune response to that primary vaccine series is likely to be **insufficient**.
- **Booster dose**: a dose of vaccine administered when the initial **sufficient** immune response to a primary vaccine series is likely to have waned over time. The need for and timing of a COVID-19 booster dose have not been established

Focus of Clinical Considerations

For people with moderate to severe immune compromise due to a medical condition or immunosuppressive treatment, the **potential to increase immune response** coupled with an **acceptable safety profile** support consideration for an additional dose of mRNA COVID-19 vaccine following an initial 2-dose primary mRNA COVID-19 vaccine series in this population

Moderately and severely immunocompromised people*

- Active treatment for solid tumor and hematologic malignancies
- Receipt of solid-organ transplant and taking immunosuppressive therapy
- Receipt of CAR-T-cell or hematopoietic stem cell transplant (within 2 years of transplantation or taking immunosuppression therapy)
- Moderate or severe primary immunodeficiency (e.g., DiGeorge, Wiskott-Aldrich syndromes)
- Advanced or untreated HIV infection
- Active treatment with high-dose corticosteroids (i.e., ≥ 20 mg prednisone or equivalent per day), alkylating agents, antimetabolites, transplant-related immunosuppressive drugs, cancer chemotherapeutic agents classified as severely immunosuppressive, TNF blockers, and other biologic agents that are immunosuppressive or immunomodulatory

*ACIP General Best Practice Guidelines for Immunization; CDC Yellow Book; 2013 IDSA Clinical Practice Guideline for Vaccination of the Immunocompromised Host

Additional considerations

- Whenever possible, mRNA COVID-19 vaccination primary series and additional dose should be given at least two weeks before initiation or resumption of immunosuppressive therapies, but timing of COVID-19 vaccination should take into consideration immunosuppressive therapies and optimization of both the patient's medical condition and response to vaccine
- Patient's clinical team is best situated to determine the degree of immune compromise and appropriate timing of vaccination
- Factors to consider in assessing the general level of immune competence of patients include disease severity, duration, clinical stability, complications, comorbidities, and any potentially immune-suppressing treatment
- Utility of serologic testing or cellular immune testing to assess immune response to vaccination and guide clinical care (e.g., need for an additional dose) has not been established and is **not recommended** at this time

Implementation Considerations

- The additional dose should be the same mRNA vaccine as the primary series
- Alternate mRNA product can be used if primary series product not available
- Until more data are available, the additional dose should be administered at least 28 days after completion of the initial primary series
- Currently there are not data to support the use of an additional mRNA COVID-19 vaccine dose after a primary Janssen COVID-19 vaccine in immunocompromised people. FDA and CDC are actively working to provide guidance on this issue.
- These clinical considerations for use of an additional dose of an mRNA COVID-19 vaccine apply only to people who are moderately or severely immunocompromised

Importance of infection prevention measures

- Immunocompromised people (including those who receive an additional mRNA dose) should be counseled about the potential for reduced immune response to COVID-19 vaccination and need to follow prevention measures*
 - Wear a mask
 - Stay 6 feet apart from others they don't live with
 - Avoid crowds and poorly ventilated indoor spaces until advised otherwise by their healthcare provider
- Close contacts of immunocompromised people should be strongly encouraged to be vaccinated against COVID-19

Updates to additional clinical resources

Pfizer-BioNTech COVID-19 Vaccine

Standing Orders for Administering Vaccine to Persons 12 Years of Age and Older

Purpose

- To reduce morbidity and mortality from coronavirus disease 2019 (COVID-19) by vaccinating persons who meet the criteria established by the Centers for Disease Control and Prevention's Advisory Committee on Immunization Practices (ACIP).

Policy

- Where authorized under state law, standing orders enable eligible nurses and other healthcare professionals (e.g., pharmacists) to assess and vaccinate persons without a "Procedure" section below without examination or direct order from time of the interaction.

Procedure

- Assess persons 12 years of age and Pfizer-BioNTech COVID-19 vaccine
 - History of myocarditis or pericarditis of an mRNA COVID-19 vaccine
 - Defers the second dose of an mRNA COVID-19 vaccine series can be considered after the episode of myocarditis completely resolved. Consider www.cdc.gov/vaccines/imz-managers/decision-support/standing-orders-for-administering-covid-19-vaccines-us.html
 - History of myocarditis or pericarditis
 - May receive any FDA-authorized episode of myocarditis or pericarditis
 - Has not completed a COVID-19 brand. If 2 doses of an mRNA vaccine additional doses are recommended
 - If the recipient has received 1 prior COVID-19 vaccine, administer the second dose at least 21 days (but preferably be at least 28 days) after the first dose
 - If the vaccine product given is not determined or is no longer available, vaccine product may be administered first dose
- Inform recipients, especially males and their parents/legal representative possibility of myocarditis or pericarditis develop after vaccination
- For people who received a COVID-

- Defers vaccination with Pfizer-BioNTech COVID-19 Vaccine for at least 90 days for persons who received passive antibody therapy (monoclonal antibodies or convalescent plasma) as part of COVID-19 treatment.
- Screen for contraindications and precautions.
 - Contraindications:
 - Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a component of an mRNA COVID-19 vaccine (Moderna or Pfizer-BioNTech)
 - Immediate allergic reaction of any severity to a previous dose or

Moderna COVID-19 Vaccine

Standing Orders for Administering Vaccine to Persons 18 Years of Age and Older

Purpose

- To reduce morbidity and mortality from coronavirus disease 2019 (COVID-19) by vaccinating persons who meet the criteria established by the Centers for Disease Control and Prevention's Advisory Committee on Immunization Practices (ACIP).

Policy

- Where authorized under state law, standing orders enable eligible nurses and other healthcare professionals (e.g., pharmacists) to assess and vaccinate persons who meet the criteria in the "Procedure" section below without the need for direct examination or direct order from the attending provider at the time of the interaction.

Procedure

- Assess persons 18 years of age and older for vaccination with Moderna COVID-19 Vaccine
 - History of myocarditis or pericarditis after receiving the first dose of an mRNA COVID-19 vaccine
 - Defers the second dose of an mRNA COVID-19 vaccine product may be administered after the episode of myocarditis or pericarditis has completely resolved. Considerations can be found at <https://www.cdc.gov/vaccines/imz-managers/decision-support/standing-orders-for-administering-covid-19-vaccines-us.html>
 - History of myocarditis or pericarditis prior to COVID-19 vaccination
 - May receive any FDA-authorized COVID-19 vaccine after the episode of myocarditis or pericarditis has completely resolved
 - Has not completed a COVID-19 vaccination series, regardless of brand. If 2 doses of an mRNA vaccine have been administered or a single dose of Janssen vaccine has been administered, no additional doses are recommended.
 - If the recipient has received 1 previous dose of Moderna COVID-19 Vaccine, administer the second dose at an interval of at least 28 days (but preferably before 42 days)
 - If the vaccine product given as the first dose cannot be determined or is no longer available, any mRNA COVID-19 vaccine product may be administered at least 28 days after the first dose.

- monoclonal antibodies or convalescent plasma) as part of COVID-19 treatment.
- Screen for contraindications and precautions.
 - Contraindications:
 - Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a component of an mRNA COVID-19 vaccine (Moderna or Pfizer-BioNTech)
 - Immediate allergic reaction of any severity to a previous dose or known (diagnosed) allergy to a component of the vaccine (see Table 1 in this document for a list of vaccine components)

Note: Persons who have a contraindication to an mRNA COVID-19 vaccine (Moderna or Pfizer-BioNTech) may be able to receive the Janssen COVID-19 Vaccine (see footnote¹). Prior to administration of Janssen COVID-19 Vaccine, inform women 18-49 years of the increased risk of thrombosis with thrombocytopenia syndrome (TTS) in these age groups.² Persons at risk for or with a history of other thrombotic not associated with thrombocytopenia can receive any FDA-authorized vaccine.

- Precautions:
 - Most people determined to have a contraindication to a COVID-19 vaccine at their appointment can and should be administered a COVID-19 vaccine.
 - History of an immediate allergic reaction³ of any severity to any other vaccine or injectable therapy (i.e., tetanus, diphtheria, pertussis, or subcutaneous vaccines or therapies)

This includes persons with a reaction to a vaccine or injectable therapy that contains multiple components, one of which is polyethylene glycol (PEG) or another vaccine component, but for whom it is unknown which component elicited the immediate allergic reaction.

- People with a contraindication to Janssen COVID-19 Vaccine have a contraindication to both mRNA vaccines (see footnotes^{1,2})
- Moderate to severe allergic reactions

¹ Administer the second dose as close as possible to the recommended interval (28 days). If the second dose is not administered within 42 days of the first dose, the first dose does not need to be repeated. Doses not administered within 28 days after do not need to be repeated. ² For information on thrombocytopenia with thrombocytopenia syndrome (TTS) see <https://www.cdc.gov/media/releases/2021/s0513-covid-19-vaccine.html>

³ Before a person is administered COVID-19 vaccine and other vaccines, providers should consider whether the patient is allergic to any of the components of the vaccine. This includes persons with a reaction to a vaccine or injectable therapy that contains multiple components, one of which is polyethylene glycol (PEG) or another vaccine component, but for whom it is unknown which component elicited the immediate allergic reaction. ⁴ Consider consultation with an allergist immunologist to help determine if a patient with a contraindication to an mRNA COVID-19 vaccine can receive the Janssen COVID-19 vaccine. Healthcare providers and health departments may also request a consultation from the Health Communication Safety Assessment (HCSA) program. Notification of these individuals should only be done in an appropriate setting under the supervision of a healthcare provider experienced in the management of severe allergic reactions.

⁵ People with a contraindication to mRNA COVID-19 vaccine (including due to a known PEG) should have a contraindication to Janssen COVID-19 Vaccine. People who have previously received an mRNA COVID-19 vaccine dose should wait at least 28 days to receive Janssen COVID-19 Vaccine. ⁶ People with a contraindication to Janssen COVID-19 Vaccine (including due to a known polyethylene glycol allergy) have a contraindication to mRNA COVID-19 Vaccine. ⁷ Medication materials are available at <https://www.cdc.gov/immunization/2021/05/13/covid-19-vaccine.html>

Prevaccination Checklist for COVID-19 Vaccines

vaccine recipients:

Following questions will help us determine if there is any reason you should not get the COVID-19 vaccine today. If you answer "yes" to any question, it does not necessarily mean you should not be vaccinated. It just means additional questions may be asked. If a "no" is not clear, please ask your healthcare provider to explain it.

	Yes	No	Don't know
Are you feeling sick today?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Have you ever received a dose of COVID-19 vaccine?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
If yes, which vaccine product did you receive?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Pfizer <input type="checkbox"/> Moderna <input type="checkbox"/> Janssen (Johnson & Johnson) <input type="checkbox"/> Another Product <input type="checkbox"/>			
Do you have a medical record card or other documentation? (yes/no)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to any of the following: (e.g., anaphylaxis) that required treatment with epinephrine or Epipen [®] or that caused you to include an allergic reaction that caused hives, swelling, or respiratory distress, including wheezing.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to any of the following: PEG, which is found in some medications, such as laxatives and nasopharyngeal sprays	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to any of the following: found in some vaccines, film coated tablets, and intravenous steroids	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to any of the following: ID-19 vaccine	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to any other vaccine (other than COVID-19 vaccine) on?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction (e.g., anaphylaxis) that required treatment with epinephrine or Epipen [®] or that it would also include an allergic reaction that caused hives, swelling, or respiratory distress.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Are you ages 18 and 49 years old	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Are you ages 12 and 29 years old	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Are you carditis or pericarditis	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to something other than a vaccine or injectable therapy such as food, pet, venom, medication allergies	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to something other than a vaccine or injectable therapy such as food, pet, venom, medication allergies	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Do you have an allergic reaction to something other than a vaccine or injectable therapy such as food, pet, venom, medication allergies	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Considerations for use of an additional mRNA COVID-19 vaccine dose after an initial 2-dose primary mRNA COVID-19 vaccine series for immunocompromised people

On August 12, 2021 FDA modified the Emergency Use Authorizations (EUAs) for [Pfizer-BioNTech](#)  COVID-19 vaccine and [Moderna](#)  COVID-19 vaccine to allow for administration of an additional dose (i.e., a third dose) of an mRNA COVID-19 vaccine after an initial 2-dose primary mRNA COVID-19 vaccine series for certain immunocompromised people (i.e., people who have undergone solid organ transplantation or have been diagnosed with conditions that are considered to have an equivalent level of immunocompromise). The age groups authorized to receive the additional dose are unchanged from those authorized to receive the primary vaccination series:

Vaccine safety systems

+

VAERS is the nation's early warning system for vaccine safety

VAERS

Vaccine Adverse Event Reporting System

<http://vaers.hhs.gov>

VAERS

VAERS accepts all reports from everyone regardless of the plausibility of the vaccine causing the event or the clinical seriousness of the event

key strengths

- Rapidly detects potential safety problems
- Can detect rare adverse events

key limitations

- Inconsistent quality and completeness of information
- Reporting biases
- Generally, cannot determine cause and effect ←

How to report an adverse event to VAERS

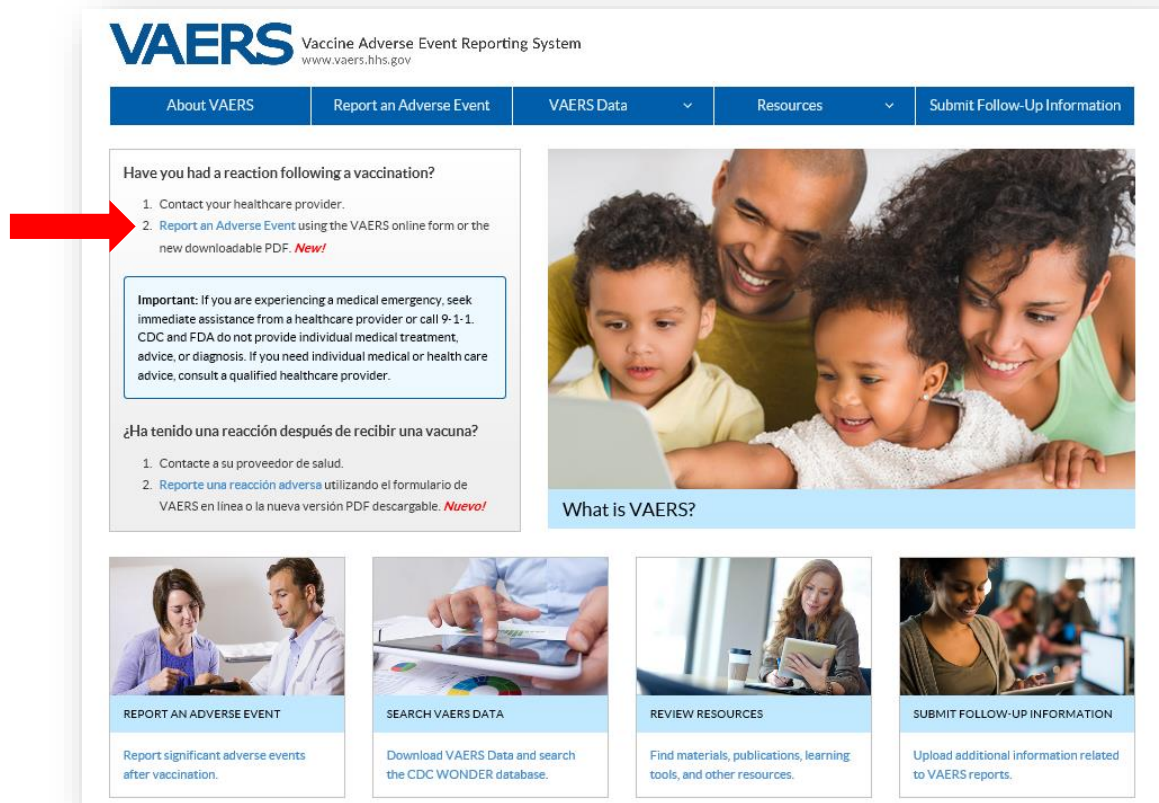

- go to vaers.hhs.gov
- submit a report online

for help:

call
[1-800-822-7967](tel:1-800-822-7967)

email
info@VAERS.org

video instructions
<https://youtu.be/sbCWhcQADFE>

The screenshot shows the VAERS website homepage. At the top, the VAERS logo is followed by the text 'Vaccine Adverse Event Reporting System' and the URL 'www.vaers.hhs.gov'. Below this is a navigation bar with five items: 'About VAERS', 'Report an Adverse Event', 'VAERS Data', 'Resources', and 'Submit Follow-Up Information'. A red arrow points to the 'Report an Adverse Event' link. The main content area features a question 'Have you had a reaction following a vaccination?' with two numbered options. The second option, 'Report an Adverse Event using the VAERS online form or the new downloadable PDF. *New!*', is highlighted. Below this is an 'Important' notice in a light blue box. Further down is a Spanish version of the question and options. To the right of the text is a large image of a family (father, mother, and two children) looking at a laptop. Below the image is the text 'What is VAERS?'. At the bottom of the page are four tiles, each with an image and a title: 'REPORT AN ADVERSE EVENT', 'SEARCH VAERS DATA', 'REVIEW RESOURCES', and 'SUBMIT FOLLOW-UP INFORMATION'. Each tile has a brief description of the service.

VAERS Vaccine Adverse Event Reporting System
www.vaers.hhs.gov

About VAERS | Report an Adverse Event | VAERS Data | Resources | Submit Follow-Up Information

Have you had a reaction following a vaccination?

1. Contact your healthcare provider.
2. Report an Adverse Event using the VAERS online form or the new downloadable PDF. *New!*

Important: If you are experiencing a medical emergency, seek immediate assistance from a healthcare provider or call 9-1-1. CDC and FDA do not provide individual medical treatment, advice, or diagnosis. If you need individual medical or health care advice, consult a qualified healthcare provider.

¿Ha tenido una reacción después de recibir una vacuna?

1. Contacte a su proveedor de salud.
2. Reporte una reacción adversa utilizando el formulario de VAERS en línea o la nueva versión PDF descargable. *Nuevo!*

What is VAERS?

REPORT AN ADVERSE EVENT
Report significant adverse events after vaccination.

SEARCH VAERS DATA
Download VAERS Data and search the CDC WONDER database.

REVIEW RESOURCES
Find materials, publications, learning tools, and other resources.

SUBMIT FOLLOW-UP INFORMATION
Upload additional information related to VAERS reports.

How to report an adverse event to VAERS

Vaccine Information

17. Enter all vaccines given on the date listed in item 4: (Route is HOW the vaccine was given, Body site is WHERE vaccine was given).

Vaccine	Manufacturer	Lot Number	Route	Body site	Dose number in series
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

18. Describe the adverse event(s), treatment, and outcome(s), if any:

19. Medical tests and laboratory results related to the adverse event(s):

20. Has the patient recovered from the adverse event(s):

Yes No Unknown

21. Result or outcome of adverse event(s):

Doctor or other healthcare professional office/clinic visit

Emergency room/department or urgent care

Hospitalization

Number of days (if known)

Hospital Name

City

State

Prolongation of existing hospitalization

Life threatening illness

Disability or permanent damage

Patient died

Date

Congenital anomaly or birth defect

None of the above

Smartphone-based active safety monitoring

<http://cdc.gov/vsafe>

Active safety monitoring for COVID-19 vaccines

- **V-safe** is a new CDC smart-phone based monitoring program for COVID-19 vaccine safety
 - uses text messaging and web surveys to check-in with vaccine recipients after vaccination
 - participants can report side effects or health problems after COVID-19 vaccination
 - reports are accepted after dose 1, 2, and 3
 - includes active telephone follow-up by CDC for reports of a medically-attended health impact event
 - identifies women who are pregnant when vaccinated or become pregnant shortly after vaccination

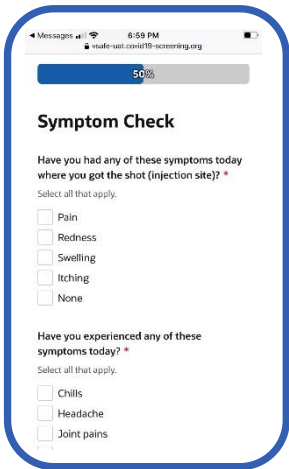

Timing of health check-ins

- **V-safe** conducts electronic health check-ins with vaccine recipients
 - daily for first week post-vaccination; weekly thereafter until 6 weeks post-vaccination
 - additional health checks at 3, 6, and 12 months post-vaccination
- Enrollment in the **v-safe** pregnancy registry occurs through a separate pregnancy follow-up process

1. text message check-ins from CDC (daily 1st week; weekly thru 6 weeks; then 3, 6, and 12 mo.)

Vaccine recipients

vaccine recipient completes web survey*

2. clinically important health impact reported

✓ received medical care

Call center

3. V-safe call center conducts active telephone follow-up on a clinically important event and takes a VAERS report if appropriate

4. pregnancy registry team conducts outreach to assess eligibility for registry and obtain consent for enrollment and follow-up

Call center

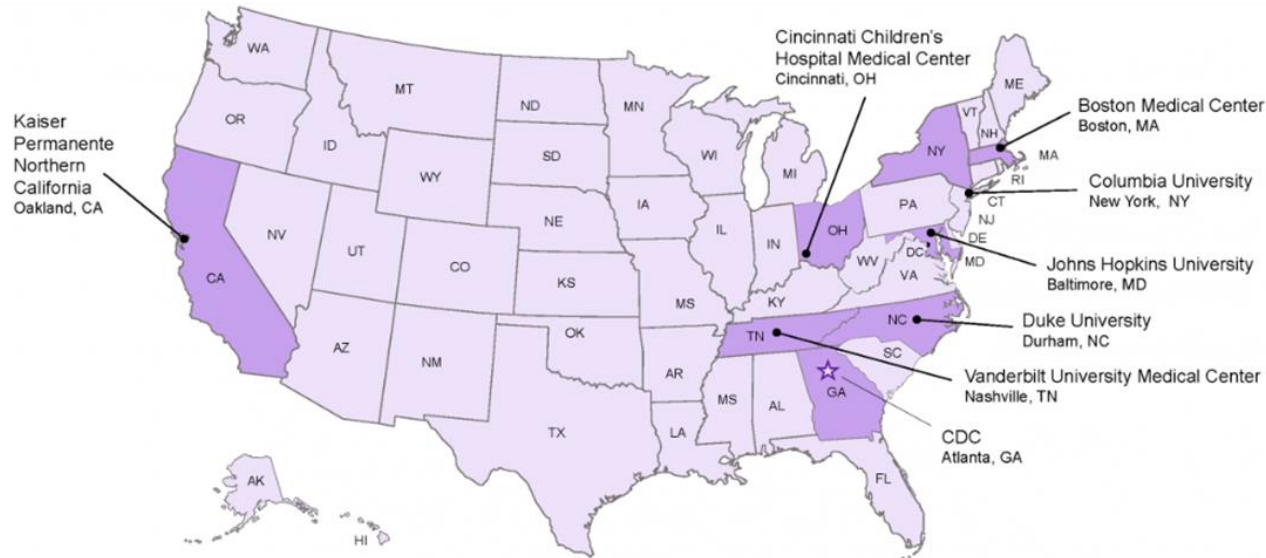

* Selected web surveys capture information on pregnancy status

CISA

Clinical Immunization Safety Assessment (CISA) Project

7 participating medical research centers with vaccine safety experts

- clinical consult services*
- clinical research

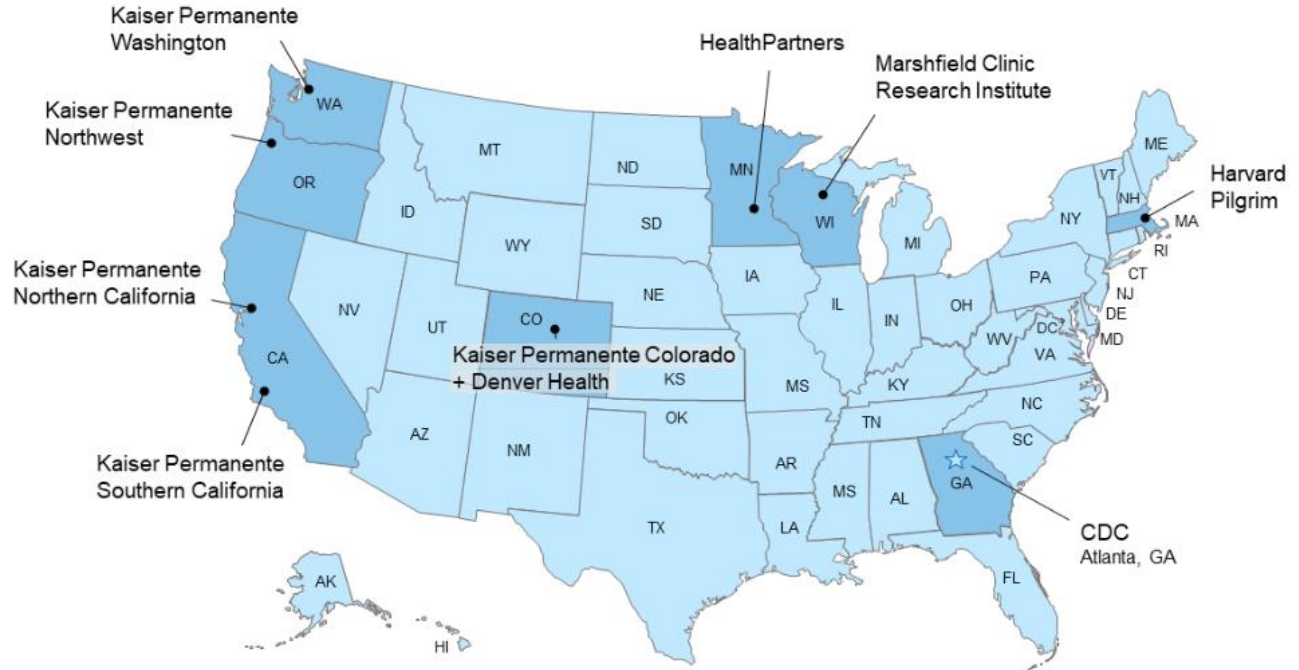

*More information about clinical consults available at <http://www.cdc.gov/vaccinesafety/Activities/CISA.html>

VSD

Vaccine Safety Datalink

- 9 participating integrated healthcare organizations
- Data on over **12 million** persons per year

Your role

COVID-19 vaccine safety gets stronger with your participation

general public

- participate in **v-safe** ✓
- report adverse event to **VAERS** ✓

healthcare providers

- encourage patients to participate in **v-safe** ✓
- continue to report clinically important adverse events to **VAERS** ✓

Acknowledgments

We wish to acknowledge the contributions of investigators from the following organizations:

Centers for Disease Control and Prevention

COVID-19 Vaccine Task Force

Vaccine Safety Team

Immunization Safety Office

Division of Healthcare Quality Promotion

Clinical Immunization Safety Assessment Project

Vaccine Safety Datalink

Food and Drug Administration

Center for Biologics Evaluation and Research

CDC vaccine safety monitoring

- Authorized COVID-19 vaccines are being administered under **the most intensive vaccine safety monitoring effort in U.S. history**
- Strong, complementary systems are in place—both new and established

v-safe

Clinician Information and Consultation Support from CDC: CDC's Vaccine Clinical Inquiries Management Team

August 17, 2021

Katherine Shealy, MPH, IBCLC
Vaccine Clinical Inquiry Management Team
CDC COVID-19 Vaccine Task Force

cdc.gov/coronavirus

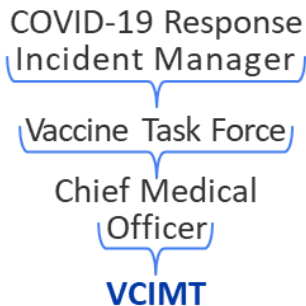

Vaccine Clinical Inquiries Management Team (VCIMT)

What is VCIMT?

VCIMT is the team responsible for systematically addressing **complex COVID-19 vaccine inquiries** and also effectively coordinating escalation and management of complex inquiry escalations from CDC-INFO (CDC's national contact center) and other CDC outreach portals.

Where does VCIMT sit?

How do inquiries get to VCIMT?

Inquirer contacts CDC*

CDC-INFO Agent **emails** VCIMT all inquiries that

are: **About COVID-19 vaccine**
Beyond CDC-INFO's scope
Clinical in nature

What does VCIMT do?

REPLY DIRECTLY **via email** that CDC receives from clinical, public health, and other jurisdictional partners

ASSIST OTHERS across CDC's COVID-19 Response that ask for help in addressing questions, inquiries and TA requests from partners

IDENTIFY and ADDRESS content gaps, emerging issues, communication priorities, collaboration opportunities

For more information, contact CDC
1-800-CDC-INFO (232-4636)
TTY: 1-888-232-6348 www.cdc.gov

To Ask a Question

- Using the Zoom Webinar System
 - Click on the “Q&A” button
 - Type your question in the “Q&A” box
 - Submit your question
- If you are a patient, please refer your question to your healthcare provider.
- If you are a member of the media, please direct your questions to CDC Media Relations at 404-639-3286 or email media@cdc.gov.

Today's COCA Call Will Be Available On-Demand

- **When:** A few hours after the live call
- **What:** Video recording
- **Where:** On the COCA Call webpage at https://emergency.cdc.gov/coca/calls/2021/callinfo_081721.asp

Upcoming COCA Calls & Additional COVID-19 Resources

- Continue to visit <https://emergency.cdc.gov/coca> to get more details about upcoming COCA Calls, as we intend to host more COCA Calls to keep you informed of the latest guidance and updates on COVID-19.
- Subscribe to receive notifications about upcoming COCA calls and other COCA products and services at emergency.cdc.gov/coca/subscribe.asp
- Share call announcements with colleagues
- Sign up to receive weekly ***COVID-19 Science Updates*** by visiting cdc.gov/library/covid19/scienceupdates.html?Sort=Date%3A%3Adesc

COCA Products & Services

COCA Call Announcements contain all information subscribers need to participate in COCA Calls. COCA Calls are held as needed.

Monthly newsletter that provides information on CDC training opportunities, conference and training resources, the COCA Partner Spotlight, and the Clinician Corner.

As-needed messages that provide specific, immediate action clinicians should take. Contains comprehensive CDC guidance so clinicians can easily follow recommended actions.

COCA Products & Services

Monthly newsletter providing updates on emergency preparedness and response topics, emerging public health threat literature, resources for health professionals, and additional information important during public health emergencies and disasters.

Informs clinicians of new CDC resources and guidance related to emergency preparedness and response. This email is sent as soon as possible after CDC publishes new content.

CDC's primary method of sharing information about urgent public health incidents with public information officers; federal, state, territorial, and local public health practitioners; clinicians; and public health laboratories.

Join COCA's Mailing List

- **Receive information about:**
 - Upcoming COCA Calls
 - Health Alert Network (HAN) messages
 - CDC emergency response activations
 - Emerging public health threats
 - Emergency preparedness and response conferences
 - Training opportunities
