- Food, Drug, and Device Safety

COCA News and Announcements

Upcoming COCA Call

NEW: Drivers of Infectious Diseases: Connections Matter
Date: Thursday, May 12, 2016
Time: 2:00 - 3:00 pm (Eastern Time)
Dial in Number: 888-769-8519 (U.S. Callers); 517-308-9276 (International Callers)
Passcode: 1002827

Animal health represents an important factor in public health as zoonoses account for nearly two-thirds of human infectious diseases—the majority are from wild species. This is especially relevant given increasing pressures on our environment that are changing human contact with wildlife, resulting in the growing threat of disease emergence to our global and local public health and economies. Leading drivers of infectious disease emergence in humans from wildlife include anthropogenic pressures such as land use change, food production systems, and trade and travel. These complex drivers require broad and novel approaches to predict and prevent disease emergence. A multi-sectoral or One Health approach that considers the human-animal-environment links can promote synergies among public health, veterinary, and medical professions with other disciplines.

Recent COCA Calls

Updated Interim Zika Clinical Guidance for Reproductive Age Women and Men, Sexual Transmission of Zika, and the U.S. Zika Pregnancy Registry
Date: Tuesday, April 12, 2016
During this COCA Call, clinicians learned about updated CDC interim guidance for caring for those with possible Zika exposure and sexual transmission or transmission in labor and delivery settings.

http://emergency.cdc.gov/coca/calls/2016/callinfo_041216.asp

Archived COCA conference calls are available at emergency.cdc.gov/coca/calls/index.asp.

Free continuing education credits (CME, CNE, ACPE, CEU, CECH, and AAVSB/RACE) are available for most
CDC Emergency Response

2016 Zika Virus

NEW: Fact Sheets and Posters in Different Languages
CDC fact sheets and posters for distribution to patients are available in languages, including Spanish, Arabic, Tagalog, Vietnamese, Mandarin, Creole, and Korean. These resources cover a variety of topics, including travel information, insect repellent, sexual transmission, and mosquito control.

http://www.cdc.gov/fs-posters/index.html

Clinicians Caring for Pregnant Women and Women of Reproductive Age

A low proportion of persons who had testing for Zika virus in the United States had confirmed Zika virus infection. Approximately 99% of asymptomatic pregnant women who were tested had no laboratory evidence of Zika virus infection.

Tools for Healthcare Providers
View printable and easy-to-use CDC fact sheets, guidance documents, and testing algorithms for Zika virus infection.

Clinical Consultation Service for Healthcare Providers Caring for Pregnant Women with Possible Zika Virus Infection
CDC maintains a 24/7 consultation service for healthcare providers caring for pregnant women with possible Zika virus infection. This consultation service is NOT for patients or the general public. To contact the service, email ZikaPregnancy@cdc.gov or call 770-488-7100.

Doctor’s Visit Checklist: For Pregnant Women Who Traveled to an Area with Zika

Doctor’s Visit Checklist: For Pregnant Women Living in an Area with Zika

MMWR: Interim Guidance for Healthcare Providers Caring for Women of Reproductive Age with Possible Zika Virus Exposure — United States, 2016
CDC has updated its interim guidance for U.S. healthcare providers caring for women of reproductive age with possible Zika virus exposure to include recommendations for counseling women and men with possible Zika virus exposure who are interested in conceiving. The updated guidelines also include recommendations for Zika virus testing and guidance for women residing along the US-Mexico Border.

http://www.cdc.gov/mmwr/volumes/65/wr/mm6512e2er.htm?s_cid=mm6512e2er_w

CDC recommends Standard Precautions in all healthcare settings to protect both healthcare personnel and patients from infection with Zika virus as well as from blood-borne pathogens (e.g., human immunodeficiency virus [HIV] and hepatitis C virus [HCV]).

Questions and Answers For Healthcare Providers Caring for Infants and Children with Possible Zika Virus Infection

Interim Guidelines for Healthcare Providers Caring for Infants and Children with Possible Zika Virus Infection — United States, February 2016
CDC has updated its interim guidelines for U.S. healthcare providers caring for infants born to mothers who traveled to or resided in areas with Zika virus transmission during pregnancy and expanded guidelines to include infants and children with possible acute Zika virus disease.
http://www.cdc.gov/mmwr/volumes/65/wr/mm6507e1.htm

Sexual Transmission

The following recommendations apply to men who have traveled to or reside in areas with active Zika virus transmission and their female or male sex partners. These recommendations replace the previously issued recommendations and are updated to include time intervals after travel to areas with active Zika virus transmission or after Zika virus infection for taking precautions to reduce the risk for sexual transmission.

Zika and Sexual Transmission

Zika Travel Information

NEW: MMWR: Ongoing Zika Virus Transmission — Puerto Rico, November 1, 2015–April 14, 2016
During November 1, 2015–April 14, 2016, a total of 6,157 specimens from suspected Zika virus–infected patients from Puerto Rico were evaluated and 683 (11%) had laboratory evidence of current or recent Zika virus infection.

Biosafety Guidance for Transportation of Specimens and for Work with Zika Virus in the Laboratory
Clinical Evaluation & Disease
Zika virus is transmitted to humans primarily through the bite of an infected Aedes species mosquito. Most people infected with Zika virus are asymptomatic. Characteristic clinical findings are acute onset of fever with maculopapular rash, arthralgia, or conjunctivitis. Other commonly reported symptoms include myalgia and headache.

Diagnostic Testing
Contact your state or local health department to facilitate testing.

Collection and Submission of Body Fluids for Zika Virus Testing

State, Local, Tribal, and Territorial Health Department Resources

US Zika Pregnancy Registry
CDC has established the US Zika Pregnancy Registry to learn more about pregnant women in the United States with confirmed Zika virus infection and their infants and is collaborating with state, tribal, local, and territorial health departments to collect information about pregnancy and infant outcomes following Zika virus infection during pregnancy.

Importation of blood products from nonaffected areas might serve a role in prevention of transfusion-transmitted Zika virus. An approved laboratory test for blood donor screening and implementation of PRT are critical for compliance with FDA guidance and to ensure a safe and sustainable blood supply. Blood collection organizations and public health organizations need to collaborate to prepare for blood safety and adequacy challenges that might arise if Zika virus transmission spreads in the United States.

Top 10 Zika Response Planning Tips: Brief Information for State, Tribal, Local, and Territorial Health Officials

Zika Virus Microsite
CDC has developed an easily embeddable collection of Zika virus information for partner and stakeholder websites. This collection, called a microsite, can supplement partner web sites with CDC’s up-to-date, evidence-based content. The content is automatically updated when CDC’s website is updated.

CDC News and Announcements

NEW: Clean Hands Count for Safe Healthcare
CDC’s Clean Hands Count campaign aims to improve healthcare provider adherence to hand hygiene recommendations, address myths and misperceptions about hand hygiene, and empower patients to play a role in their care by asking or reminding healthcare providers to clean their hands.
http://www.cdc.gov/features/handhygiene/index.html

NEW: Hepatitis C Kills More Americans than Any Other Infectious Disease
New CDC studies underscore urgency of hepatitis C testing and treatment, especially for baby boomers. Deaths associated with hepatitis C reached an all-time high of 19,659 in 2014, according to new surveillance data released by the CDC.
http://www.cdc.gov/media/releases/2016/p0504-hepc-mortality.html

NEW: ADHD Treatment for Young Children
CDC is calling on doctors, nurses, and allied health professionals who treat young children with ADHD to support parents by explaining the benefits of behavior therapy and refer parents for training in behavior therapy.

UPDATED: Case Counts

Seasonal Influenza

Information for Health Professionals – (CDC)
http://www.cdc.gov/flu/professionals/index.htm

Weekly Flu View – April 23 (CDC)
Flu View is a weekly influenza surveillance report prepared by CDC’s Influenza Division. All data are preliminary and may change as CDC receives more reports.
http://www.cdc.gov/flu/weekly/

Planning and Preparedness: Health Professionals and Seasonal Flu – (HHS)
Healthcare providers play an important role during flu season. The following guidance and information will assist healthcare providers and service organizations to plan and respond to seasonal flu.
Travel Safety

Current Travel Warnings – April 21 (U.S. Department of State)
The U.S. Department of State issues Travel Warnings when long-term, protracted conditions make a country dangerous or unstable. Travel Warnings recommend that Americans avoid or carefully consider the risk of travel to that country. The State Department also issues Travel Warnings when the U.S. government's ability to assist American citizens is constrained due to the closure of an embassy or consulate or because of a drawdown of State Department staff.

Morbidity and Mortality Weekly Report (MMWR)

MMWR publications are prepared by CDC. To electronically subscribe, go to www.cdc.gov/mmwr/mmwrsubscribe.html

Food, Drug, and Device Safety

NEW: Multistate Outbreak of Listeriosis Linked to Frozen Vegetables - (CDC) CDC is collaborating with public health officials in several states and the U.S. Food and Drug Administration (FDA) to investigate a multistate outbreak of Listeria monocytogenes infections (listeriosis). Listeria can cause a serious, life-threatening illness.

NEW: Fluconazole (Diflucan): Drug Safety Communication - FDA Evaluating Study Examining Use of Oral Fluconazole (Diflucan) in Pregnancy - (FDA) FDA is evaluating the results of a Danish study that conclude there is a possible increased risk of miscarriage with the use of oral fluconazole (Diflucan) for yeast infections.

NEW: Aripiprazole (Abilify, Abilify Maintena, Aristada): Drug Safety Communication - FDA Warns About New Impulse-control Problems - (FDA) FDA is warning that compulsive or uncontrollable urges to gamble, binge eat, shop, and have sex have been reported with the use of the antipsychotic drug aripiprazole (Abilify, Abilify Maintena, Aristada, and generics). These uncontrollable urges were reported to have stopped when the medicine was discontinued or the dose was reduced.

MedWatch: The FDA Safety Information and Adverse Event Reporting Program – (FDA) MedWatch is your Food and Drug Administration (FDA) gateway for clinically important safety information and reporting serious problems with human medical products.
http://www.fda.gov/Safety/MedWatch/default.htm

FoodSafety.gov: Reports of FDA and USDA Food Recalls, Alerts, Reporting, and Resources – (HHS/USDA/FDA/CDC/NIH) Foodsafety.gov lists notices of recalls and alerts from both FDA and the U.S. Department of Agriculture. Visitors to the site can report a problem or make inquiries.
www.foodsafety.gov/recalls/recent/index.html
The Emergency Risk Communication Branch in the Division of Emergency Operations, Office of Public Health Preparedness and Response is responsible for the management of all COCA products.
